Suggestions for *Growing Strawberries*

By HILTON JOHNSON

1. Set the best Virus Free - Disease Free Certified Blue Tag plants available.
2. Buy plants from reliable plant growers. This insures variety purity.
3. Select well drained land that is as free of grass and weed seed as possible. Row or sprinkler irrigation insures against drouth—very important.
4. Plant bed rows should be well prepared and just high enough for drainage, irrigation and cultivation.
5. Suggested row width, 36 inches to 42 inches.
6. Plant spacing in rows, 12 inches to 48 inches, depending on kind of plants, and local conditions.

Plants per acre:

36 in. between rows, 18 in. spacing, 9680 plants.
38 in. between rows, 18 in. spacing, 9170 plants.
40 in. between rows, 18 in. spacing, 8713 plants.
36 in. between rows, 30 in. spacing, 5808 plants.
38 in. between rows, 30 in. spacing, 5503 plants.
40 in. between rows, 30 in. spacing, 5228 plants.

7. Fertilizer. Have your soil analyzed for necessary type and amount. Your County Agent will help and advise. Basic recommendations, 200 lbs. 5-10-5 under beds before setting.
8. Cultivate regularly. Keep clean of grass and weeds. Irrigate a few days before you think it is needed. Do not allow water to cover or stand on plants.
9. Pest control. Consult your County Agent.
10. Consult your County Agent or College of Agriculture for advice in your area.
11. There are 14,520 feet of rows in an acre if rows are 36 inches apart:
13,726 feet in rows 382 inches apart.
13,070 feet in rows 40 inches apart.
12,446 feet in rows 42 inches apart.
